Custom Software Development

Business-specific software designed, developed and maintained around your workflow.

Project Overview

A mid-sized distribution business was running its daily operations across spreadsheets, paper registers and three disconnected tools. We designed and delivered a custom Laravel application built entirely around the way their team already worked, instead of forcing them into an off-the-shelf product.

The Challenge

- Stock, invoicing and delivery records lived in separate spreadsheets with no single source of truth.
- Manual data entry created duplicate records and frequent reconciliation errors.
- No role-based access, so every staff member could see and edit everything.
- Management had no reliable reporting and relied on end-of-month manual summaries.

Our Solution

- Ran a full workflow discovery and mapped every existing manual process before writing code.
- Built a modular Laravel application with role-based access control for admin, sales and warehouse users.
- Designed a normalised MySQL schema with proper relationships, indexes and validation rules.
- Added an activity log and automated daily backups for traceability and data safety.
- Delivered a reporting dashboard with exportable summaries for management.
- Provided staff training and an ongoing maintenance plan after go-live.

Technologies Used

Frontend	HTML5, CSS3, JavaScript, Bootstrap, Vue.js
Backend	PHP, Laravel, REST API
Database	MySQL
Dev & Collaboration	Git, GitHub, VS Code, XAMPP

Results

Metric	Before	After
Time spent on daily data entry	approx. 3 hours/day	approx. 35 minutes/day
Duplicate or mismatched records	Frequent	Near zero
Monthly report preparation	2 working days	Instant export
Systems staff must log into	4	1

Key Takeaway

Software built around an existing workflow is adopted far faster than software that asks a team to change how they work. A careful discovery phase is what makes the difference between a tool people use and a

tool people avoid.

Note: Figures shown are representative project outcomes and can be replaced with your own verified client data before sharing.
