AI & Automation

Smart automation solutions that reduce repetitive work and improve business efficiency.

Project Overview

A support and operations team was spending most of its day on repetitive work: sorting incoming enquiries, summarising long email threads and copying details into internal records. We introduced AI-assisted automation inside their existing Laravel application.

The Challenge

- High volume of incoming enquiries sorted and routed entirely by hand.
- Long message threads had to be read in full before anyone could act on them.
- Repetitive copy-paste work between the inbox and the internal system.
- Staff time was consumed by routine tasks instead of actual customer problems.

Our Solution

- Integrated an AI API into the Laravel backend for classification and summarisation of incoming messages.
- Built automated routing rules so each enquiry reaches the right team without manual triage.
- Added AI-assisted draft replies that a human reviews and approves before sending.
- Automated recurring workflows - record creation, reminders and scheduled reports - through queued jobs.
- Kept a human approval step and full audit log for every automated action.
- Exposed automation controls in a Vue.js dashboard so the team can tune rules themselves.

Technologies Used

AI & Automation	AI API Integration, Workflow Automation, API-based Automation
Frontend	HTML5, CSS3, JavaScript, Bootstrap, Vue.js
Backend	PHP, Laravel, REST API
Database	MySQL
Dev & Collaboration	Git, GitHub, VS Code, XAMPP

Results

Metric	Before	After
Manual enquiry triage	approx. 2.5 hours/day	approx. 20 minutes/day
Average first response time	Several hours	Well under an hour
Repetitive data entry tasks	Daily	Automated
Human oversight	N/A	Approval step on every action

Key Takeaway

The most valuable automation removes repetitive work while keeping a human in the loop for judgement. Automating the routine and reviewing the exceptions gives the efficiency gain without giving up control or accountability.
